

CloseLoop AI

Meetings Should

End With Execution.

An MCP-powered autonomous meeting execution platform —
transforming conversations into tracked, assigned, and chased work.
Zero manual handoff.

By Team One piece

MCP-POWERED

Manual & Error-Prone

Often Forgotten

15–30 Min Wasted

Per meeting, teams lose time on repetitive admin instead of moving directly to execution.

From Decision to Execution — Automatically

CloseLoop AI closes the gap between **what was decided** and **what gets done**. Every step is automated through MCP tools — no manual handoff required.

Every integration hits a **real external API** when credentials are configured — nothing fabricates a fake ticket ID, message timestamp, or event link.

What CloseLoop AI Does Automatically

Decision Extraction

Gemini-powered structured extraction of decisions, owners, and deadlines with confidence scoring.

Jira Ticket Creation

Real Jira Cloud tickets created automatically. Confidence <80% triggers human approval gate.

Calendar & Slack

Google Calendar invites scheduled. Slack follow-ups and escalations sent without manual effort.

GitHub Tracking

Issues created, PRs linked to decisions, and merge progress monitored in real time.

Executive Reporting

Weekly Notion reports published. Live Control Tower dashboard with aggregated metrics.

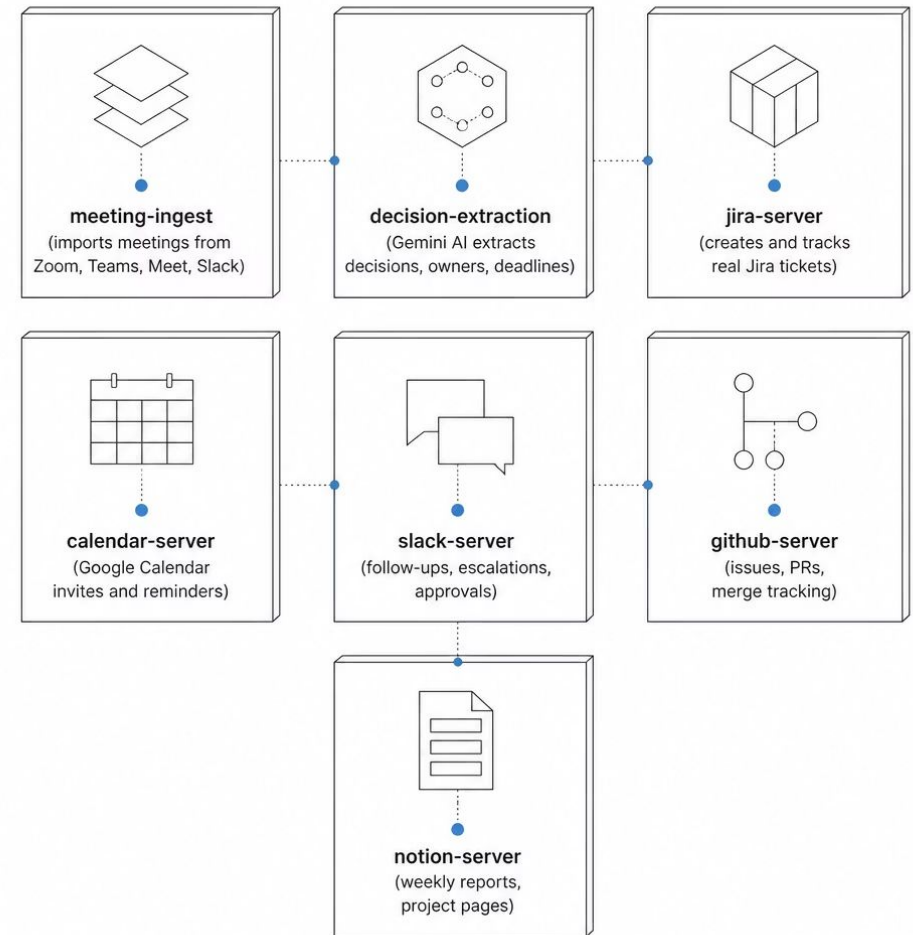

Auto-Escalation

Hourly scanner escalates overdue tasks to Slack managers — no AI tool call required.

Architecture: MCP Server Modules

CloseLoop is built as a modular MCP server — each capability is an independent module exposing tools and resources through the Model Context Protocol. Any compatible AI client can orchestrate the full workflow.

📋 **Human-in-the-loop confidence gate:** Decisions with confidence <80% require explicit approval before a ticket is created — preventing false automation.

Why MCP? Infrastructure, Not an App

CloseLoop doesn't compete with your existing tools — it **becomes the connective layer** between your AI client and your entire work stack.

Universal AI Client Support

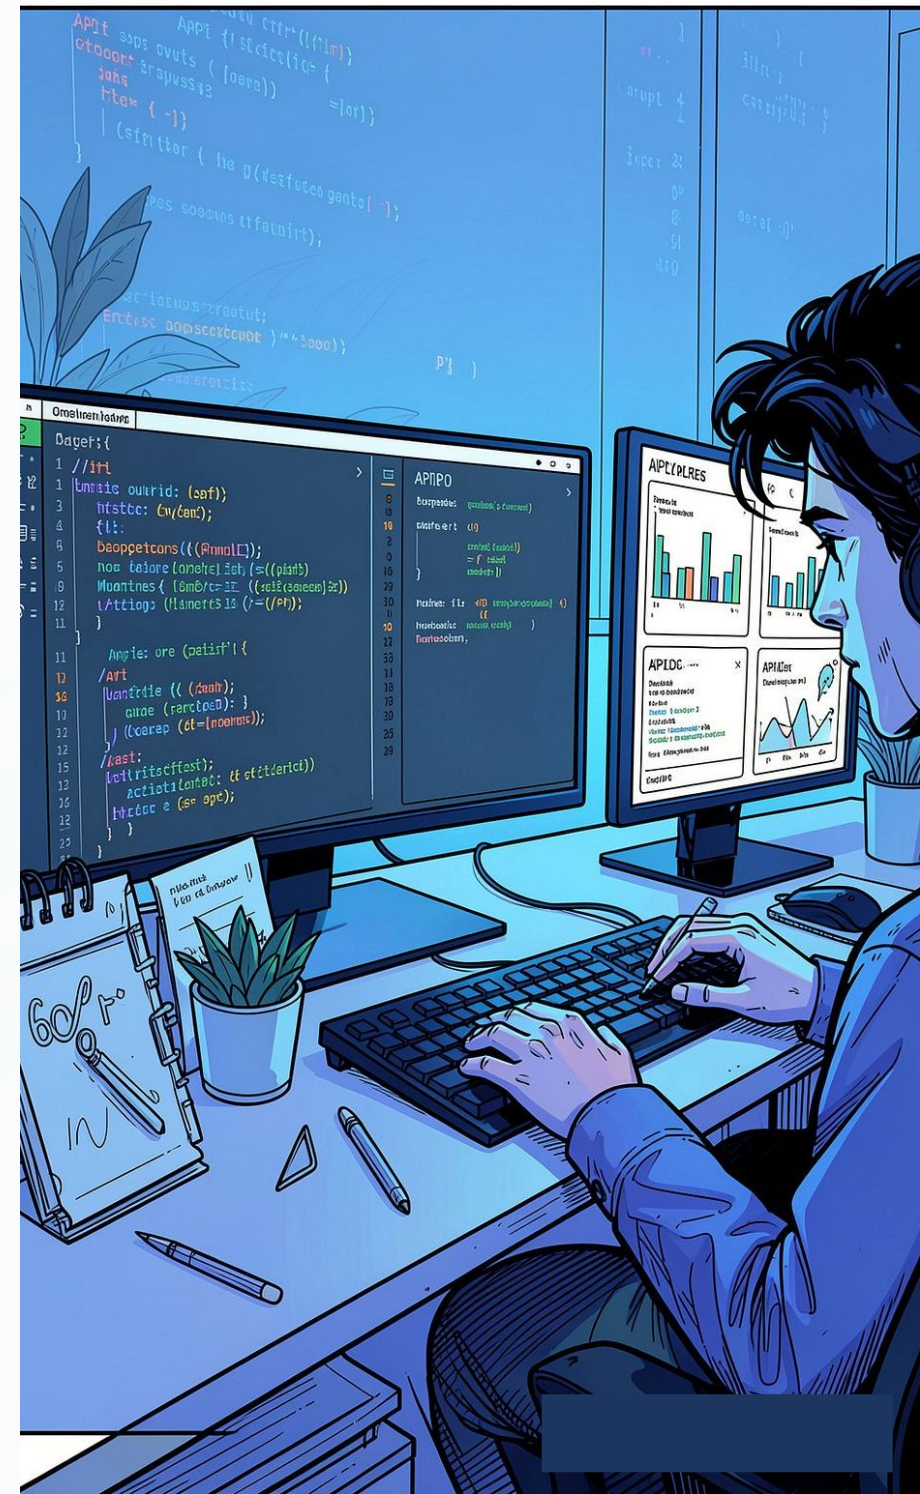

NitroStudio, Claude Desktop, Cursor, and ChatGPT can all invoke the same tools. No vendor lock-in.

Multi-Tenant by Design

Users connect their own OAuth credentials. Tokens are AES-256-GCM encrypted per-user — never shared, never hashed.

Transparent Execution

Every tool response includes `real: true/false` — judges and users always know if a live API was hit or a local fallback used.

Supported Integrations

CloseLoop connects to the platforms your team already uses — every integration is a **real, live API connection**, not a simulation.

Zoom

Microsoft Teams

Google Meet

Slack

Jira Cloud

GitHub

Google Calendar

Notion

MongoDB

Gemini AI

Measurable Impact

CloseLoop eliminates the manual overhead that follows every meeting — freeing teams to move from discussion to execution instantly.

15–30min

Saved Per Meeting

No more manual ticket creation, owner assignment, or reminder scheduling.

80%

Confidence Threshold

AI-gated approval ensures only high-confidence decisions become tickets automatically.

0

Manual Handoffs

Decisions flow automatically from transcript to tracked, assigned work.

10+

Live Integrations

Real API connections across Jira, Slack, GitHub, Calendar, Notion, and more.

How It Works in Practice

01

Meeting Ends

Transcript ingested from Zoom, Teams, Meet, or Slack Huddle.

02

AI Extracts Decisions

Gemini identifies decisions, owners, deadlines, and confidence scores.

03

Tools Execute Automatically

Jira tickets created, Calendar invites sent, Slack notified — in seconds.

04

Progress Tracked & Escalated

GitHub PRs monitored. Overdue work escalated. Weekly reports published.

The Result

Every meeting ends with a clear, tracked, and enforced execution plan — no human intervention required between "we decided X" and "it's done."

The Future of Meeting-Driven Work

CloseLoop AI is not another note-taking tool. It is the **execution layer** that organizations have been missing — turning every meeting into a catalyst for real, measurable progress.

Accountability

Every decision has an owner and a deadline.

Speed

Execution begins the moment the meeting ends.

Visibility

Live dashboards keep leadership informed.

Built on NitroStack · MCP-Powered · Real API Integrations · Zero Fabrication
